      Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score

AAR97326; (IMMU-) IMMUNOMEDICS INC monoclonal (first entry) 94US-00318157. 95WO-US011964. antibody heavy chain framework region.

New humanised anti-CEA monoclonal CDRs, used for diagnosis, imaging antibody - having engrafted murine and therapy of CEA-producing cancers.

WPI; 1996-209653/21. Hansen HJ, Armour KL;

Claim 7; Page 39; 62pp; English.

New humanised monoclonal antibodies (MABs) comprising the complementary determining regions (CDRs) of a parental murine class III anticarcinoembryonic (CEA) MAB engrafted to the framework regions (PRs) of a heterologous antibody which can be derived from any species including human, retain the anti-CEA binding specificity of the parental murine MAB but are less immunogenic in a human subject than the parental MAB. The humanised antibodies can be used in diagnosis, imaging and therapy of CEA conjugates show improved therapeutic results, decreased immune responses and decreased immune-mediated adverse effects compared to the parent antibody. This sequence corresponds to the second framework region of the heavy chain of the humanised MAB. See AAR97313-97333

The antibodies are useful for preparing a composition for the treatment of cancer, and for imaging tumours associated with activated stromal fibroblasts, such as colorectal cancer, non-small-cell lung cancer, breast cancer, head and neck cancer, ovarian cancer, lung cancer, bladder cancer, pancreatic cancer and metastatic brain cancer, and diseases associated with the same, such as inflammation and wound healing. The present sequence is a peptide described in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Park J,

                                                                                         HFR2
                                                                                                                                                                                                                                                                                                                                                                          The invention describes an immunopolypeptide comprising a polypeptide that binds to human glucose-6-phosphate isomerase (GPI). The methods to compositions are used for diagnosis and treatment of human autoimmune disease, e.g., human rheumatoid arthritis. This is the amino acid sequence of human anti-GPI-antibody heavy chain variable region frames
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunopolypeptide for diagnosis and treatment of human autoimmune disease, e.g., human rheumatoid arthritis, comprises a polypeptide that binds to human glucose-6-phosphate isomerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, anti-glucose-6-phosphate isomerase-antibody; immunopolypeptide; anti-GPI-antibody; GPI, glucose-6-phosphate isomerase; autoimmune disease; rheumatoid arthritis; heavy chain variable region;
             Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to an immunoglobulin molecule comprising of one or more heavy chain framework regions comprising HFR1, HFR2, HFR3 or HFR4 and one or more light chain framework regions comprising LFR1, LFR3 LFR3 or LFR4; and complementarity determining regions (CDRs) comprising CDR-H1, CDR-H2, CDR-H3 and/or CDRH1, CDR-L2 or CDR-L3. The immunoglobulin is useful in therapeutic or diagnostic assays comprising ELISA, phage display, tumour imaging or protein chips assays. Further, the immunoglobulin is useful in screening assays for detecting molecules that immunoglobulin is useful in screening assays for detecting molecules that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New immunoglobulin molecule, useful in therapeutic or diagnostic assays comprising EDISA, phage display, tumor imaging or protein chips assay or in screening assays for detecting molecules that bind to the immunoglobulin molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 14 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 7; SEQ ID NO 2; 198pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC clone where (I) binds to and neutralises botulinum neurotoxin type A specific CC clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope cCC specifically bound by an antibody expressed by a clone chosen from clone c25, C25, C39, IC6, 3D12, B4, IF3, huC25, Arl, Ar2, WRI(V), WRI(T), 3-1, CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum cCC emprising BONT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anti-cc different epitope of a botulinum neurotoxin antibodies, where each antibody is specific for a clifferent epitope of a botulinum neutralisation than the single antibodies in surplus. The following are disclosed; a pharmaceutical composition (C comprising (I); and a kit comprising (I) (I) is useful for neutralising a botulinum neurotoxin which (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin which (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin than the composition or fantibodies in surplus. (I) is useful for diagnosing the botulism correction of antibodies associated with botulinum neurotoxin than the cc single antibodies in surplus. (I) is useful for diagnosing the botulism correction or diagnosis of botulism. This is the amino acid sequence of mouse heavy chain anti-BoNT-antibody framework region 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The invention describes an isolated antibody (I) that specifically binds compensed by a specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (CC (BoNT/A). An isolated antibody (I) that specifically binds to an epitope compensed by a specifically bound by an antibody expressed by a clone chosen from clone (S25, C25, C39, IC6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1, CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum compensation (I) binds to an epitope that is specifically bound by an antibody expressed by a clone chosen from clone comprising BoNT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (II) comprising several anticc of insurplus and polypeptide (II) comprising several anticc composition antibodies, where each antibody is specific for a different epitope of a botulinum neurotoxin and the combination of comprising (I); and a kit comprising (I). (I) is useful for neutralising CC subject of the comprising (I) and a kit comprising (I). (I) is useful for neutralising CC subject of a different epitope of the botulinum neurotoxin which (I) is specific for a different epitope of the botulinum neurotoxin than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of antibodies shows greater toxin neutralisation than the composition of the botulinum neutralisation of the botulinum courotoxin whic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated antibody (I) that specifically binds colone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I), that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone CC specifically bound by an antibody expressed by a clone chosen from clone CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum cC neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) cc comprising BoNT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I) i producing (I); and a composition (III) comprising several anticc different epitope of a botulinum neurotoxin antibodies, where each antibody is specific for a cdifferent epitope of a botulinum neurotoxin and the comprising (I); and a kit comprising (I) is useful for neutralising comprising (I); and a kit comprising (I) is useful for neutralising comprising (I); and a kit comprising a botulinum neurotoxin which comprising (I); and a kit comprising a botulinum neurotoxin and the composition of antibodies in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the comprising (I); and a kit comprising a botulinum neurotoxin and the comprising (I); and a kit comprising (I) is useful for neutralising considered to the composition of antibodies in surplus. (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin than the comprising (I); and the comprising (I); and the comprising (I) is useful for an entralisation than the comprision of antibodies in surplus. (I) is supplus, where each of (I) is enabled antibodies in surplus associated with botulinum neurotoxin than the comprision of the botulism of the botulism of the comprision of mouse heavy chain anti-BoNT-antibody framework region 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              뭐

The invention describes an isolated antibody (I) that specifically binds CC to an epitope specifically bound by an antibody expressed by a specific CC clone where (I) binds to and neutralises botulinum neurotoxin type A CC (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody (I) that specifically binds to an epitope CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum CC comprising BoNT/A neutralising epitope Having an epitope that is CC specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anticce different epitope of a botulinum neurotoxin antibody shows greater toxin neutralisation than the single antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed; a pharmaceutical composition (CC comprising (I); and a kit comprising (I) is useful for neutralising EONT/A antibody and for neutralising a botulinum neurotoxin which (CC involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the compination of antibodies shows greater toxin neutralisation than the CC or for treating pathologies associated with botulinum neurotoxin than the consideration of antibodies in surplus. (I) is useful for diagnosing the botulism (CC enables rapid detection or diagnosis of botulism. This is the amino acid sequence of mouse heavy chain anti-BoNT-antibody framework region 2.
                                                                                                                                                                                                                                                                                                               RESULT 10

                                                                                                                                                                                                                                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CT The invention describes an isolated antibody (I) that specifically binds CC clone where (I) binds to and neutralises botulinum neurotoxin type A CC (BNNT/A). An isolated antibody (I) that specifically binds to an epitope Specifically bound by an antibody expressed by a specific CC (BNNT/A). An isolated antibody (I) that specifically binds to an epitope CC specifically bound by an antibody expressed by a clone chosen from clone CC comprising BoNT/A neutralising epitope having an epitope that is CC specifically bound by an antibody expressed by clones as mentioned in (I); producing (I); and a composition (II) comprising several anti-CC producing (I); and a composition (II) comprising several anti-CC different epitope of a botulinum neurotoxin antibodies, where each antibody is specific for a cC comprising (I); and a composition neutralisation than the single antibodies shows greater toxin neutralisation than the single antibodies comprising (I); and a kit comprising (I) is useful for neutralising a botulinum neurotoxin which (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the CC single antibodies in surplus. (I) is useful for diagnosing the botulism cC or or to treating pathologies associated with botulinum neurotoxin botulism cC or ables rapid detection or diagnosis of botulism. This is the amino acid cequence of mouse heavy chain anti-BoNT-antibody framework region 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           useful for diagnosing with botulinum neurotoxin poisoning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31-AUG-1998; 98US-00144886.

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BONT/A). An isolated antibody (I) that specifically binds to an epitope New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated 31-AUG-1998; 01-AUG-2003; 2003US-00632706. Example 4; SEQ ID NO 152; 110pp; English (REGC ) UNIV CALIFORNIA. 01-AUG-2002; 2002US-0400721P. botulinum neurotoxin poisoning. Amersdorfer P; 98US-00144886.

```
CC (BONT/A). An isolated antibody (I) that specifically binds to an epitope CC (BONT/A). An isolated antibody expressed by a clone chosen from clone CC specifically bound by an antibody expressed by a clone chosen from clone CC specifically bound by an antibody expressed by a clone chosen from clone CC comprising BONT/A neutralising pitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I) comprising bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anticce different epitope of a botulinum neurotoxin antibody is specific for a CC different epitope of a botulinum neurotoxin and the combination of comprising (I); and a kit comprising (I). (I) is useful for neutralising comprising (I); and a kit comprising (I). (I) is useful for neutralising comprising (I); and a kit comprising (I). (I) is useful for neutralising BONT/A antibody and for neutralising a botulinum neurotoxin which (I) is comprising (I); and a kit comprising (I). (I) is useful for neutralising a botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the comprising of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the combination of antibodies associated with botulinum neurotoxin and the combination of antibodies associated with botulinum neurotoxin correction or diagnosis of botulism. This is the amino acid correction of diagnosis of botulism. This is the amino acid correction of diagnosis of botulism. This is the amino acid correction of diagnosis of botulism.

                                                                                                                 밁
                                                                                                                                              ঠ
                                                                                                                                                                                                                                                                 The invention relates to an isolated human monoclonal antibody, or its CC variant, directed against deletion mutants of epidermal growth factor receptor, particularly to the type III deletion mutant (EGFRVII). Also CC included are a hybridoma cell line producing the above antibody, a cC included are a hybridoma cell line producing the above antibody, inhibiting cell CC proliferation associated with the expression of EGFRVIII, an isolated CC polynucleotide molecule comprising a nucleotide sequence encoding a heavy CC or light chain amino acid sequence (or its fragment), an article of CC manufacture (comprising a container, a composition contained in the CC container, and a package insert or label indicating that the composition container can be used to treat cancer characterized by the expression of EGFRVIII, CC where the composition comprises the antibody cited above), an assay kit CC for the detection of EGFRVIII in mammalian tissues or cells (to screen CC EGFRVIII being an antibody that binds the antibody carciancers, the kit CC comprising an antibody that binds the antipen protein and means for CC indicating the reaction of the antibody with the antigen, if present), a CC contribution of the antibody with the antigen, if present), a CC contribution of the antibody with the antigen, if present), a CC contribution of the antibody with the antigen, if present to CC EGFRVIII, making antibody are useful for diagnosing, preventing CC cancer, gliomas, tumors and carcinomas. The present sequence is a peptide contributed from a VH region of an antibody structure.

                                                                                                                                                                                The invention relates to a novel method for killing a target cell. The comprises contacting the cell with an isolated antibody or its mutant (BGFRVIII), the antibody being conjugated to a therapautic agent, which is a toxin chosen from AEFP, MMAE, AURISTATIN B, DM-1 and ZAP, and where the antibody comprises a heavy chain amino acid sequence chosen from antibodies 13.1.2, 131, 170, 150, 095, 250, EGFR variants are caused by gene rearrangement accompanied by gene amplification. Eight major cocurring variants of EGFR are known. EGFRVIII, which is the most commonly cocurring variant of EGFR in human cancers, comprises a 267 as in-frame delation in the extracellular domain. The method of the invention commistrates cytostatic activity and may be useful for inhibiting cell constrated with the expression of EGFRVIII or for compliferation associated with the expression of EGFRVIII. As such the method may be utilized, in vivo, on a mammal e.g. human, suffering from an epithelial cell cancer such as lung, colon, gastric, renal, prostate, companied by the sum and the prostate, glioblastoma or ovarian carcinoma. The current sequence is that cof a human anti-epidermal growth factor receptor type III variant correction and the prostate of a human anti-epidermal growth factor receptor type III variant
                                                                  Query Match
